

Progress Report till March 2024

Preparation of Detailed Project Report (DPR) for rejuvenation of *Subarnarekha* and *Damodar* rivers through forestry interventions

SECTION –A (GENERAL):		
1	Project Title	Preparation of Detailed Project Report (DPR) for rejuvenation of <i>Subarnarekha</i> and <i>Damodar</i> rivers through forestry interventions
2	Institute Name	Institute of Forest Productivity, Ranchi
3	Project Duration	24 Months
4	Date of Start	August 2022
5	Planned Date of Completion	September, 2024
6	Approved Budget (Rs.)	1.17 Cr
7	Name & Designation of Nodal Officer	Dr. Sharad Tiwari, Scientist-‘G’
8	Funded By	NAEB, MOEF&CC, Govt. of India
	Addl. Research Manpower (Nos. & date from which engaged): (RO/ RA/ SRF/ JRF/ PA/ FA/JPF/SPF/SMS)	SMS-1 Nos. JPF- 4 Nos.

(FINANCIAL ACHIEVEMENT) (UTILIZATION CERTIFICATE ATTACHED)			
Total Budget Outlay: 1.17 Cr			
Year Wise Expenditure Details			
Financial year	Received (Rupees in Lakh)	Expenditure (Rupees in Lakh)	Balance
2022-23	40.0	39,40,731	59269
2023-24	36.57	36.57	NIL

Project Synopsis

This project aims to prepare a detailed project report (DPR) to rejuvenate the Damodar and Subarnarekha rivers through forestry intervention. The project has achieved significant milestones, including the stakeholder engagement through state-level workshops for SFD officials and other stakeholders including representatives from Agriculture, Horticulture, Rural, Irrigation, Revenue departments, academicians, and NGOs. A series of division-level training courses on data collection and field validation were organized to aware and train the frontline staff of various forest divisions falling within the riverscape. In accordance with stakeholder consultation, a 5 km riverscape buffer has been delineated and prepared, facilitating the participation of a wide range of stakeholders and offering a more comprehensive approach to rehabilitating different land classes, ultimately contributing to the amelioration of the riparian landscape and rivers. Additionally, a detailed geographical profile of the riverscape has been developed, comprising GIS layers including maps for watershed/micro-watershed, soil erosion, soil depth, drainage network, forest cover/type, land use and land cover (LULC), elevation, slope, and other related features. Using these GIS layers, a Multicriteria Decision Analysis Approach (MCDA) was employed to create a Priority Area Map (PAM) for the entire riverscape area, which categorizes high, moderate, and low-risk zones considering the soil degradation scenario of the riverscape. Intervention sites for the proposed landscape classes (Natural, Agriculture, and Urban) were field-validated with data concerning Natural Land class were provided by the respective forest divisions. An extensive field survey was conducted to validate the Agriculture Land class and interact with farmers to raise awareness about the proposed endeavor and understand their perspective regarding species choice. Based on the Riverscape GIS profile and stakeholder interaction, the intervention models have been developed for different land classes. The proposed measure lays the foundation for informed decision-making and targeted interventions aimed at rejuvenating and preserving the Damodar and Subarnarekha rivers. The activity wise detailed report is given in following section:

SECTION –B (PHYSICAL TARGETS AND ACHIEVEMENTS):
Target 1:
Review of existing data/information knowledge
Target Quarter: I and II
Status: COMPLETED
The literature review concerning Subarnrekha and Damodar has been conducted. Based on the literature survey, chapters on Damodar and Subarnrekha Basin are being prepared.

Target 2:
Identification of knowledge gaps, scoping of forestry activities and developing strategy
Target Quarter: I and II
STATUS: COMPLETED
On the basis of consultation with stakeholders, a 5Km riverscape buffer for the entire study area including rivers Damodar, Subarnrekha and their major tributaries was generated. Consequently, following major tributaries were included. The interaction meet and existing literature revealed sporadic initiatives towards river rejuvenation. For the rejuvenation of these rivers, a holistic approach is necessary. Although, River Rejuvenation Committee exist in Jharkhand and West Bengal, but they more primarily focused to address river pollution.

Sl. No.	Tributaries for Damodar River	Tributaries for Subarnrekha River
1	Garhi	Raru
2	Haharo	Kanchi
3	Bokaro	karkari
4	Konar	Kharkai
5	Jamuniya	Dulung
6	Kudiya	Sankh
7	Barakar	Jumar
8	Bhera	Garra
9	Darkeswar	
10	Sila/Shilabati	

Target 3:	Identification of stakeholders/ academia/ experts/ organizations/ agencies for developing implementation plan on forestry interventions
Target Quarter:	Quarter I and II
STATUS: COMPLETED	
Due to the presence of a variety of land classes, including natural, agricultural, and urban, in the riverscape, all relevant departments such as Forest, Agriculture, Horticulture, Mining & Industries, Land resources, Urban and Rural development were identified as potential stakeholders for the current endeavor.	
Letters to concerning states i.e. Jharkhand, West Bengal and Odisha were sent regarding appointment of State Nodal Officers from different stakeholders (including forest, agriculture, land revenue, soil conservation, irrigation, water resource and mines).	

Target 4 & 5:	
Conduction of kick off meeting/Workshop & brain storming session with state representative	
Target Quarter:	Quarter I, II, and III
STATUS Completed	
<u>Jharkhand:</u>	
A number of meetings with stakeholder departments have been done. Some of the major events are enlisted below:	
A meeting with APCCF CAMPA, Shri Sanjeev Kumar, IFS, CAMPA and was held on the 23 rd of August, 2022.	
Meeting with Shri N K Singh, IFS, APCCF and Development was held on September 7 th 2022.	
Meeting with State Nodal officer, S R Natesha, CCF, Wild Life, Jharkhand, was held on September, 28, 2022.	
A workshop involving senior forest officers including APCCF, CCF, CF and DFOs of all the concerned forest divisions was held on 12 th October at IFP, Ranchi. The workshop aimed at apprising the forest officials with the prospective activities under the PDR. The workshop was held through <u>Hybrid Mode</u> .	
A state level inception workshop involving stakeholders from forest, agriculture, revenue, pollution control, rural development, water resources, irrigation and urban under the purview of riverscape was held on 13 th December at Palash Sabhagar, Ranchi, Jharkhand. The workshop provided a platform to interact with different stakeholders and collect their feedback on the proposed plan of activities under the DPR.	
Meeting State Nodal Officer, WB, at Webel IT Park, Durgapur on 25-03.2023, regarding status of training to frontline staff of SFD, WB and field data from concerning forest divisions. Accordingly, he issued a letter to all the concerned DFOs, to speed up the data collection process and submit it to IFP, Ranchi.	

Figure 1: Deliberations during the state-level-workshop for the forest officers of Jharkhand, held at IFP, Ranchi on 12th October, 2022.

Figure 2: State-level-Inception workshop held at Palash Sabhagar, Ranchi on 13th December, 2022

West Bengal:

A meeting with PCCF &HoFF, West Bengal was held on 2nd September 2022.

Shri Kalyan Das, CCF, CE Circle was appointed as the State Nodal Officer for West Bengal.

A meeting with the State Nodal Officer, West Bengal was held on 13th September, 2022 at Durgapur to appraise him with the project concept and activities.

During the meeting future course of actions, data required and stake-holder participation was discussed.

A workshop involving CCF, CF and DFOs of the concerning forest divisions under the riverscape of Damodar, Subarnrekha and its major tributaries was conducted on 28th Nov, 2022 at IT Webel Park, Durgapur, West Bengal. During the workshop, a presentation on defined riverscape and prospective activities was given. The expected support from the State Forest Department was also deliberated. The concerns and feedback provided from the participants were appropriately addressed.

Figure 3: Presentation during the state level workshop for the forest officers held at Webel IT Park, Durgapur on 29th November, 2022. The forest officers including CCF, CF and DFOs of the concerned forest divisions participated in the meeting.

Interaction with allied departments.

Meeting with the State Nodal Officer, Agriculture Department, West Bengal was held on 20th Feb, 2023. Dr Sharad Tiwari, Nodal Officer, IFP, Ranchi apprised him about the DPR activities and expected support from Agriculture department.

On February 21, 2023, a meeting with Dr Rajesh Kumar, IPS, Member Secretary of the Pollution Control Board of West Bengal was held. Dr. Sharad Tiwari, Nodal Officer, IFP, Ranchi, briefed him on DPR activities and solicited the participation of major metropolitan departments, including Asansol and Durgapur. The scientists from the Pollution Control Board of West Bengal interacted and discussed the state's efforts to rejuvenate the Damodar River. In addition to these major meets, numerous interaction meets with stakeholders such as was with Director, Sericulture, West Bengal, Director, Agriculture, Jharkhand, Head, Environment, CCL, Ranchi was carried out.

Odisha:

A meeting with PCCF & HoFF, Odisha, was held on 26th August 2022.

A State Nodal Officer from the State Forest Department has been appointed.

A state level meeting was held on 22th Feb, 2023 at Sankalp Community Hall, Baripada, Odisha. The workshop included participants from forest, revenue, agriculture, and land resources. The workshop was attended by ADM, RCCF, and DFOs. During the workshop, the defined riverscape and prospective plan was presented and discussed.

Figure 4: Presentation on Subarnarekha river during State-Level inception workshop for Odisha, held at Sankalp Community Hall, Baripada on 22nd February, 2023.

Target 6:	Identification, selection & prioritization of forestry intervention sites and type of treatment plans (natural, agriculture and urban landscapes), Preparation of riverscape buffer zone
Target Quarter:	Quarter II, III, and IV (GIS layers attached as Annexure II)
STATUS: COMPLETED	
Based on stakeholder discussion it was decided to consider a uniform 5 km riverscape buffer for Damodar and Subarnrkha and their major tributaries. Accordingly, the riverscape has been prepared.	
Collection of primary data (Slope, Aspect, Elevation, Temperature, Precipitation, Administrative Boundary, Village Data, and Drainage) has been completed.	
Most of the GIS layers such as Forest type/Forest cover map, Micro watershed map, DEM data have been acquired and delineated for the riverscape area.	
The micro-watershed data for the riverscape area has been prepared.	
The catchment area map of the entire study area has been prepared.	
Origin Point of Main River and major tributaries were extracted using geospatial technique. These points were physically verified.	
Land Use Land Cover (LULC) of the riverscape area has been prepared.	
Topographical data such as slope, elevation, aspect etc has been prepared.	
The Jharkhand and West Bengal Forest departments have provided the GIS map of the forest divisions within the riverscape. These boundaries will be used for analysis at the division level.	
The Spring Map, Agriculture Practices Map for Jharkhand has been acquired from JSAC, Ranchi.	
Designing data collection forms in bilingual for all three states has been completed (Attached Photos in Annexure-1).	
A priority area map for the entire riverscape for both the rivers have been prepared.	
An elephant corridor map for the riverscape area has been prepared.	
Location maps for the proposed intervention sites for the natural and agriculture landscape has been prepared	
Drainage area network map for Jharkhand, West Bengal, and Odisha has been developed.	
Division-wise area analysis has been carried out. Accordingly, the potential intervention areas in the Natural, and Agriculture landscape has been identified. (Annexure III)	

Target 7: Interaction with front end staff of SFD for explaining Data collection mechanism and data collection

STATUS: Completed.

Some of the divisions requested retraining, and that is being done. Further, the issues with the intervention data received from the field are being taken up with the concerned forest divisions.

Target Quarter: Quarter III and IV

Jharkhand:

The divisional training of the frontline forest staff has begun. A team from IFP, Ranchi explained the concept and method of data collection for the project. They were provided access to a pre-designed data form. In addition, they were taught how to use KML files of riverscape buffer with Google Earth using mobile device to collect location data. The following table provides training dates by division

SI No	Name of Division	Date of Training	Revise Training
1	Khunti	21-11-2022	
2	Ranchi	25-11-2022	
3	Jamshedpur	29-11-2022	
4	Latehar	02-12-2022	
5	Dhanbad	09-01-2023	30-11-2023
6	Hazaribagh East, West, NP, WL	11-01-2023	
7	Lohardagga	12-01-2023	
8	Chaibasa&Saraikela	19-01-2023	
9	Ramgarh & Bokaro	24-02-2023	
10	Koderma	21-03-2023	
11	Jamtara	24-03.2023	

Figure 5: Photographs of Front-line staff training programs held at different forest divisions of Jharkhand.

West Bengal:

Training of frontline forest staff for data collection has begun on a division-by-division basis. A team from IFP, Ranchi, visited the divisions and explained the project's concept and method of data collection. Participants were provided access to a pre-designed data form. In addition, they were instructed on how to use KML files of riverscape buffers with Google Earth and mobile phones to collect location data. The following table provides training dates by division.

SI No	Name of Division	Date of Training
1	Durgapur	19-12-2022
2	Bankura North & South	20-12-2022
3	Panchet	21-12-2022
4	Purulia, Kangsabati North & South	29-12-2022
5	Jhargram	04-01-2023
6	Medinipur & Rupnarayan	05-01-2023
7	Purba Medinipur	06-01-2023
8	Burdwan	15-02-2023
9	Kharagpur	17-02-2023

Figure 6: Photographs of Front-line staff held training programs held at different forest divisions of West Bengal.

Odisha

Training of frontline forest staff for data collection has begun on a division-by-division basis. A team from IFP, Ranchi, visited the divisions and explained the project's concept and method of data collection. Participants were provided access to a pre-designed data form. In addition, they were instructed on how to use KML files of riverscape buffers with Google Earth and mobile phones to collect location data. The following table provides training dates by division.

SI No	Name of Division	Date of Training
1	Rairangpur	30-01-2023
2	Baripada	30-01-2023
3	Balasore	30-01-2023

Figure7: Photographs of Front-line staff held training programs held at Baripada forest divisions of Odisha.

Target 8: Field visits and survey of prioritized sites, data collection, and analysis
Target Quarter: Quarter IV, and V
STATUS: COMPLETED
Field Survey: Completed for the entire study area.
To evaluate the field conditions of Damodar, Subarnrekha, and their tributaries in Jharkhand and West Bengal, an extensive field survey was conducted. The survey included Panchet, Maithon dam, the Jharia coal field area, Dhanbad, the Industrial area in Muri, Dhanbad, Bokaro, Asansol, and Durgapur. In addition, field surveys to Bankura, Burdwan, Medinipur, and Jhargram has also been carried out. Photographs, field data and interaction with local people have been done to collect the local knowledge base.
The field survey to various parts has shown that in the majority of agricultural landscapes, paddy is grown as a single crop. There was no evidence of Agroforestry practices in the visited areas of Jharkhand, Odisha and West Bengal.
<i>L. camara</i> and <i>C. odorata</i> were noted as the predominant invasive species distributed in the region.
Parts of Phusro, Jharia, Dhanbad, Jamshedpur, Asansol, and Durgapur were the most polluted spots along the riverscape. This was quite obvious given that these are the region's industrial hubs.

GIS ANALYSIS: COMPLETED

Riverscape Analysis: Complete for all the stakeholder states i.e. West Bengal, Jharkhnad, and Odisha. Based on GIS analysis, information concerning Riverscape area, priority area, LULC profile including Natural Landcape, Agriculture Landcape, Urban, Water body, Fallow land, Aquifer maps, Industries, Watershed profile, Soil profile, Forest Division area prioritization, Potential sites for intervention, Village profile, and other related profile have been generated. Some of these data facts are shown through Attachment II.

Figure 8: Origin point of River Subarnarekha at Rani Chua, Nagri, Ranchi, and Jharkhand. Location Coordinates: 23°18'6.58"N, 85°11'3.11"E. The river originates from underground spring.

Target 9: Preparation of Intervention models/Draft DPR**STATUS: Completed for West Bengal****Target Quarter: Quarter IV, and V**

Intervention models for NATURAL, AGRICULTURE and URBAN LANDSCAPE have been prepared and **completed for West Bengal**. In the current DPR we have proposed 5 intervention models for Natural landscape, 01 for Agriculture landscape, and 02 models are proposed for Urban Landscape. These models have been provided to SFD, for its review, so that the same can be better discussed during the proposed workshop.

The models for the Jharkhand and Odisha are being prepared. The progress for Jharkhand and Odisha was **affected due to delay in receiving data** for the intervention sites from Jharkhand and Odisha SFD. This part will be completed by 25th April.

For Jharkhand, intervention sites data for Natural Landscape are received from six forest divisions. The matter is taken up with the PCCF and HoFF, Jharkhand and assured of expedited by 20th April. At the same time field survey for the Agriculture Landscape has been completed.

Writing Draft Report

The draft report is being prepared. We are writing separate reports for the Damodar and Subararekha rivers. Reports concerning each river will have Two Volumes. The first draft chapters on Introduction, Riverscape Profile, Intervention Approach, and Implementation mechanisms has been completed under Vol I for both the rivers. Under Vol II The writing for state-wise chapters is in progress. In this part, the state chapter for West Bengal has been completed for both the rivers. For Jharkhand, and Odisha the state chapters are partially completed. The part of the chapter concerning intervention models and budget will be expected to be completed by 30th April. Part of these chapters depends upon Proposals from the stakeholder states. It is expected to get the data from remaining sites by 20th April, 2024.

Target 10: Conduction of final state level consultation workshop to discuss draft DPR for finalization**Target Quarter: Quarter V, and VI**

Conduction of final state level consultation workshop to discuss draft DPR for finalization for WB is proposed in April, 2024, and for Jharkhand in May 2024. We have requested SFD, West Bengal, for the convenient date for the workshop. The workshop is proposed in HYBRID MODE.

Constraints:

The progress of the work was affected due to the late release of funds. The fund for the current financial year was released in September 2023. The hired research fellows left the project, and this required the reappointment of project staff. The field surveys could not be taken up. All this affected the activities, and the expected target could not be timely achieved. Another factor that affected the timely execution of target was due to Delay in receiving field data for intervention sites from the concerned forest department. The target for West Bengal has been completed, but got compromised for Jharkhand as complete data is still awaited. We have discussed the matter with PCCF and HoFF, Jharkhand. He has taken serious note of it and assured to expedite the issue by 20th April, 2024.

Intervention Models

Forestry intervention strategies concerning river rejuvenation involve a combination of approaches aimed at improving the health and function of riparian ecosystems. The strategies typically focus on restoring indigenous vegetation, managing land use practices, and the adoption of sustainable forestry practices. Current DPR offers diverse intervention models to achieve aforementioned objectives. Following are some of major considerations that have been taken into account to formulate intervention models:

1. Based on LULC, three major categories of different land classes such as Natural, Agriculture, and Urban were delineated for the riverscape area.
2. A priority zonation map for the riverscape area was generated, considering various factors such as soil profile, slope, landscape, elevation, and landclass. Subsequently, High, Moderate, and Low priority areas were assigned and mapped for the riverscape.
3. Consultation with forest department officials to gain insight in their prioritised species to meet local goals.
4. Extensive field surveys were conducted to interact with farmers, and study the existing agriculture practices, and to gain insight to farmers and local people's perspective for the river rejuvenation and local environmental issues. These surveys aim to understand farmers' preferences for species selection in agroforestry models and homestead plantation.
5. Screening of species based on agro-climatic zone, forest type of the riverscape area, and stakeholder's preference.
6. Desirability and economical viability of agroforestry models.

Table.1: Proposed Intervention Models for West Bengal under Subarnrekha Riverscape

I - Natural Landscape (NL) Subarnarekha River		
States	Model name	States Model name Model no.
West Bengal	Sal and Associate Species Conservation Model	SB/WB/NL/01
West Bengal	Restoration of degraded Sal Forest Model	SB/WB/NL/02
West Bengal	Multiple shoot cutting	SB/WB/NL/03
West Bengal	Wetland Management Model	SB/WB/NL/04
West Bengal	Elephant Corridor Model	SB/WB/NL/05
II – Agricultural Landscape (AL) Subarnarekha River		
West Bengal	Silvi-Agri-Horticulture Model	SB/WB/AL/01
III – Urban Landscape (UL) Subarnarekha River		
West Bengal	River Front Development	SB/WB/UL/R/01
West Bengal	Park Development	SB/WB/UL/P/02

Table.2: Proposed Intervention Models for WB under Damodar Riverscape

I - Natural Landscape (NL) Damodar River		
States	Model name	States Model name Model no.
West Bengal	Sal and Associate Species Conservation Model	DM/WB/NL/01
West Bengal	Restoration of degraded Sal Forest Model	DM/WB/NL/02
West Bengal	Mixed Indigenous Species Conservation Model	DM/WB/NL/03
West Bengal	Elephant Corridor Model	DM/WB/NL/04
West Bengal	Wetland Management Model	DM/WB/NL/05
II – Agricultural Landscape (AL) Damodar River		
West Bengal	Silvi-Agri-Horticulture Model	DM/WB/AL/01
III – Urban Landscape (UL) Damodar River		
West Bengal	River Front Development	DM/WB/UL/R/01
West Bengal	Park Development	DM/WB/UL/P/02

***Model details and proposed costs are well discussed and described in the concerned chapters.**
